

Progress report

Making xaraya react to the `mt_keywords` MT member was easy with the existing keywords module. The harder part (read: more time consuming) was to make the visual presentation of them in the site somewhat acceptable.

If you view this article by itself (what we call the **display** view in Xaraya), you'll notice an extra part on the right side "Related entries" which lists other entries which have the same keywords attached to them. This allows a reader to quickly read all entries which have the same or similar taxonomy. ~~The block isnt fully functional yet, because it reacts to some keywords while it doesn't for others, so there's still some digging to do there.~~ (FIXED)

Outstanding task list:

- making Xaraya react on the `mt_tb_ping_urls` member
- deal with the allow/disallow flags for trackback and comments
- find a home for `mt_excerpt`
- implement the `mt.supportedTextFilters` method to allow for markdown or textile input
